Professional Summary

Results-oriented Principal Software Engineer with over 36 years of experience architecting and delivering scalable, high-impact systems. As a versatile technical leader, I specialize in translating complex business requirements into maintainable, production-ready code across mobile, web, and distributed backend environments. I have a proven track record of leveraging AI-driven development to accelerate delivery and mentoring cross-functional teams to exceed performance benchmarks.

Core Skills

- **Languages:** Java, Ruby, JavaScript, TypeScript, Kotlin, Swift, C/C++, PHP, HTML, CSS
- **Frameworks & Platforms:** Spring, Ruby on Rails, React, React Native, Expo, Apple SDKs (iOS), Android SDK, Windows SDK, .NET
- **Cloud & CI/CD:** AWS, Azure, Heroku, GitHub Actions, Expo Application Services
- **Testing & Monitoring:** JUnit, RSpec, Jest, Jasmine, Mocha, Maestro (E2E), Datadog, New Relic, Sentry
- **Databases & Data:** PostgreSQL, MySQL, IBM DB2, Microsoft SQL Server, Oracle, Pentaho Data Integration
- **Dev Tools:** IntelliJ IDEA, Xcode, Visual Studio, Git, GitHub, Gradle, Maven, Ant
- **AI-Assisted Development:** Cursor, Google Gemini, ChatGPT, Windsurf

Professional Experience

Principal Consultant, Improving — Columbus, OH | 2016–2018; 2024–Present

- **Lark (Lark Health):** Senior IC on a greenfield rebuild of the Lark Health mobile app using Expo, React Native, and TypeScript.
 - Architected a full CI/CD pipeline with GitHub Actions and Expo Application Services (EAS) for automated build and release.
 - Implemented new settings features and supporting screens using modern React Native patterns.
 - Established automated end-to-end tests with Maestro and Maestro Cloud integrated into CI.
 - Leveraged AI assistants (Cursor, Gemini, ChatGPT) to accelerate delivery and improve developer throughput.
- **Mattress Firm:** Partnered with analytics to identify and resolve complex tracking defects, improving data accuracy and reliability.
 - Led removal of a legacy UI framework, improving maintainability, performance, and developer experience.
 - Upgraded the website to the latest React and Next.js versions to unlock modern features and performance.
- **Amazon Web Services (AWS):** Enhanced the cross-platform PostgreSQL ODBC driver with Aurora features (IAM/Okta/Secrets Manager/Federated Identity; Aurora Limitless).
 - Added cross-platform build support and GitHub Actions workflows for automated builds and tests on Windows, macOS, and Linux.
- **Sherwin-Williams:** Developed scalable Java/Spring Data APIs for Customer and Territory domains as part of data-domain consolidation.
 - Produced OpenAPI documentation via Spring WebFlux and springdoc-openapi; standardized and published through Stoplight.
 - Implemented a circuit-breaker pattern to improve database resiliency with automated failure detection and reporting.

- **Abercrombie & Fitch:** Delivered a comprehensive checkout redesign on the customer website, improving UX and conversion.
 - Collaborated with backend teams to enhance checkout APIs for performance and reliability.
 - Technologies: HTML5, SASS/CSS, JavaScript, IBM WebSphere Commerce, IBM DB2.
- **OSU Health Plan:** Enhanced the LinkToHealth web app to improve member and care-coordinator workflows and usability.
 - Built and maintained ETL jobs with Pentaho Data Integration and SQL to synchronize large data sets across systems.
 - Technologies: Java, MySQL, SQL, Pentaho Data Integration.

Additional responsibilities:

- Columbus Office Coordinator for ImprovingU (internal training): gathered course ideas, recruited instructors, and managed logistics.
- Supported sales/estimation with technical discovery and solutioning.
- Mentored consultants one-on-one to support growth and delivery quality.

Senior Product Engineer, Empora Title — Remote | 2021–2024

- Led architecture and development of a new real-estate title platform enabling CS teams, agents, and clients to initiate, track, and close transactions end-to-end.
- Delivered full-stack features from requirements and UI designs through database design, implementation, testing, and deployment—reducing SLA times and improving UX.
- Collaborated with product and design to clarify requirements and evaluate solution alternatives aligned to business goals.
- Conducted daily peer code reviews to maintain quality and performance standards.
- Owned production support rotations, triaging and resolving user-reported issues directly with end users.
- Technologies: Ruby on Rails, PostgreSQL, TypeScript/Javascript, Ember.js, GitHub, Linear, Sentry, New Relic.

Senior Software Engineer, Root Insurance — Columbus, OH | 2018–2021

- Implemented a billing-date change feature, increasing customer satisfaction and retention by enabling preferred billing dates.
- Built the “Savings Finder” to help customers in hardship adjust coverage rather than cancel.
- Launched auto-insurance rating and quoting for new states in the mobile app to support geographic expansion.
- Delivered in-app growth and engagement features, driving acquisition and referrals.
- Extended key mobile features to the website for a consistent cross-platform experience.
- Developed backend APIs and schemas with Ruby on Rails and PostgreSQL; deployed and supported services on AWS.
- Technologies: Ruby on Rails, React, React Native, PostgreSQL, Mocha, Jest, RSpec, HTML, CSS, JavaScript.

Director, Technology Solutions & Solutions Architect, Leading EDJE — Dublin, OH | 2012–2016

- Architected and developed a native Android app and server solution for a major trucking firm to diagnose and service vehicles in the field.
- Built an iPhone app and Apple Watch companion to manage work orders from the wrist.
- Led a hybrid iOS/Android app for mortgage-closing assignment and management.
- Delivered an Android tablet app used by 1,200+ service technicians for work-order and timesheet automation.
- Created a native iOS app for sales to calculate consultant margins on the go.
- Implemented push notifications for a native Android app for real-time equipment alerts.
- Technologies: Apple SDKs, Android SDK, Objective-C++, Java, JavaScript, HTML, CSS.

Advisory Software Engineer, IBM (formerly Sterling Commerce) — Dublin, OH | 2000–2012

- Designed, developed, and tested features for IBM Sterling B2B Integrator, a Java-based multi-enterprise integration suite used by Fortune 500s.
- Contributed to Gentran Server for Windows (C++/MFC) for order processing and data translation.

Technical Analyst, The Limited, Inc. — Columbus, OH | 1998–2000

- Built TCP/IP-based credit-card authorization and sales-reporting applications for Bath & Body Works POS systems.
- Developed IT management utilities to support store operations and reporting.

Software Engineer III, Diebold, Inc. — Canton, OH | 1996–1998

- Implemented RTF text-box functionality, banking-rules logic, and PIN verification for a major banking client's ATM platform.

Staff Programmer, Lexmark International, Inc. — Lexington, KY | 1989–1996

- Designed and built a Windows 3.1 network-printer management application for remote administration across multiple protocols.
- Contributed to innovations resulting in six U.S. patents related to network-printer management.

Patents

- US Patent 5,699,494 — Remote replication of printer operator panel
- US Patent 5,720,015 — Method and apparatus for providing remote printer resource management
- US Patent 5,727,135 — Multiple printer status information indication
- US Patent 5,819,015 — Method and apparatus for providing remote printer resource management
- US Patent 5,905,906 — Method and apparatus for configuring multiple printers on a network
- US Patent 6,112,256 — Method and apparatus for configuring the physical setup of multiple printers on a network

Education

University of Cincinnati — B.S. in Computer Science (Honors), 1989

Speaking Engagements

- A Swift Introduction to Swift — M3 Conference; Columbus Code Camp
- AWS Java Lambda Functions with Kotlin — Beer City Code; Ohio DevFest
- Boost Your Team's Bus Factor: Creating Docs That Work — Momentum Developer Conference
- Kotlin, Spring Boot, and REST on Azure — Momentum Developer Conference; Music City Tech; DogFoodCon
- How a Senior Engineer with 30+ Years Stayed and Advanced on the Technical Track — Momentum Developer Conference
- Hybrid or Native – Mobile Strategy — M3 Conference
- Implementing Push Notifications in Android — CodeMash; M3 Conference; That Conference
- Living on Borrowed Time: Where Are the Docs? — CodePaLOUsa; Path to Agility; DogFoodCon; Columbus Code Camp
- Real-World Mobile App Development Using PhoneGap — M3 Conference; StirTrek
